

Hello there, I hope all is well!
If you are reading this file, congrats you are not a bot!

I am looking to hire a React/Shopify developer for continuous work on an eCommerce project built with React.

React + TypeScript + FE development is a must. Shopify ecosystem knowledge is plus but unnecessary;
I will provide onboarding and orientation. If you lack Shopify experience, do not hesitate to reach out. I need strong Front-end and React skills and a willingness to learn quickly; Shopify skills can be picked up on the fly.

- * You will work closely with our developers and designers.
- * There is potential for more work, even full time down the line.

Willing to hire someone for a long-term part-time partnership.

1. It will take 1 day a week of work
2. Each week, we will review and agree on the work scope (8 hours of work or less. Depends on your speed)
3. I pay a fixed monthly rate of \$500

Very good opportunity for those who is looking for stable, monthly or weekly side-income that can grow as we expand.
We are based in Los Angeles, so all the communication happens by LA time;

Still reading? Good, please provide me with your availability for a quick interview call, LA time please.

Cheers, Ray.
